TiPS has enhanced the LogMateAMS® TRAC™ module with alarm KPI functionality. LogMateAMS TRAC can now calculate and display KPI trends that help you monitor alarm system performance and changes over time. TRAC trends can be visually compared against performance benchmarks or combined with other plant trends to see relative comparisons to other plants or units.

The LogMateAMS TRAC module is OPC-HDA compliant, essentially functioning as an OPC enabled KPI server and client. KPI trend calculations are broadcast using OPC-HDA communications. TRAC trends can be viewed within the standard LogMateAMS browser, or in any OPC-HDA compliant client. A thin-client browser interface and OPC communications make TRAC a true enterprise-capable alarm KPI solution.

LogMateAMS TRAC KPIs can be combined with historian trends, loop performance data, and actual alarm or event frequency charts – all within the same browser screen.

Contact us for a hands-on demonstration or visit the TRAC webpage for more information: <http://www.tipsweb.com/trac>.

About TiPS:

TiPS is a pioneer in alarm management software, producing the first version of LogMate in 1990. Since then, LogMate has been refined over 15 years and hundreds of installations around the globe. TiPS prides itself on quality, feature-rich products that perform in the most grueling test. TiPS is a thought leader in alarm management, committed to education and empowerment of our current and future clients.
