

News Release: Root Cause Analysis Made Easier Through First Out Alarm Report
Release Date: Immediate (January 31, 2007)
From: TiPS, Inc., USA
Media Contact: Chris Wilson, Tel: +1 512 863-3653 extension 520, Email: chris@tipsweb.com

Root Cause Analysis Made Easier Through First Out Alarm Report

With the addition of the First Out Report to the LogMate Alarm Management System, TiPS has given operators and engineers a forensic tool that can immediately identify the likely "first out" alarm that marked the beginning of an upset. The First Out Report provides a snapshot style visualization of plant upsets in order of alarm activations. Using a proprietary grouping and sorting algorithm, the LogMate First Out Report identifies upsets and displays associated alarms sorted by chronological activation order.

The LogMate First Out Report is used during incident reviews to provide insight into root causes. Engineers can also use the report as a design tool for eliminating duplicate, redundant, or cascading alarms. Because LogMate collects alarm data in real-time, an operating team can use the report to see the alarms that most likely triggered an upset, or by a supervisor as an advisory tool during upset conditions.

As with all LogMate reports, the First Out Report is accessed through a standard Internet Explorer browser. The First Out Report is available with the LogMate ACE alarm analysis module.
