***Telvent Alarm Manager – Powered by LogMate®: Telvent and TiPS Announce Alarm Management Partnership.***

The “Pipeline Inspection, Protection, Enforcement, and Safety Act of 2006” requires SCADA users to review and audit alarms on their SCADA systems. To address these requirements and provide customers an easy way to comply with them, Telvent integrated TiPS LogMate® alarm management software system with their OASyS system. *Telvent Alarm Manager – Powered by LogMate®* is the result. It brings an integrated alarm management solution to the pipeline industry. Although the focus of the integration is on the OASyS DNA system, *Telvent Alarm Manager – Powered by LogMate®* can be interfaced with all Telvent SCADA systems. This allows alarm information from multiple types of systems to be consolidated in a central depository. Telvent selected TiPS based on their market position, their technology alignment with Telvent products as well as LogMate’s rich features set and experience in all aspects of alarm management. TiPS Incorporated and their LogMate product suite integrates with Telvent products by providing a drop in alarm management infrastructure that includes a complete set of tools for any alarm management activity, from nuisance alarm reduction, to system rationalization and performance tracking.

“We are extremely excited about this relationship,” adds Bob Weibel, president of TiPS. “*Telvent Alarm Manager – Powered by LogMate®* provides the pipeline industry with a complete alarm management solution and a path to compliance with regulations.”

According to Telvent’s Energy Division President Larry Stack, “Telvent is very excited about the opportunities this agreement presents. Both existing and new customers must address the legislated requirement to review and audit alarms on their SCADA systems. Along with the ability to strategically manage their alarming sub-systems, customers will be looking for more sophisticated tools to ‘make it easy’ to comply with the new requirements.”

*About TiPS Incorporated:*

*TiPS is a pioneer in alarm management software, producing the first version of LogMate® in 1990. LogMate has been refined over 18 years and hundreds of installations are around the globe. Effective delivery of plant information empowers operations to make timely, accurate control decisions. TiPS products provide a complete infrastructure for improving alarms, managing the design process, performance reporting and procedural documentation.
