FOR IMMEDIATE RELEASE

TiPS, Inc. Celebrates 25 Years

Providing Comprehensive Alarm Management Solutions

Georgetown, TX – January 7, 2013 - TiPS, Inc. (www.tipsweb.com) the premier global alarm management company is proud to celebrate 25 years serving the alarm management needs of the process industries. We began in 1988 as a process controls consulting firm and during a customer engagement developed a software replacement for logging printers. Understanding that there was a broader need for this solution, in 1990 we introduced LogMate, effectively the first ever commercial alarm management software package.

Today, LogMate continues to serve the alarm management needs of thousands of customers in numerous industries having evolved in step with software, operating system and computer technology changes. TiPS has also added products and services through the years to support a more holistic approach to optimizing alarm management and improving overall manufacturing operations. By aligning with industry leading subject matter experts, we have expanded our ability to help clients manage the entire alarm management lifecycle.

Bob Weibel, president of TiPS stated, “We take great pride in being able to look back on the past 25 years and celebrate this milestone. However, our greatest excitement is in looking to the future. We are actively improving our products and intend to deliver even more value to our customers with upcoming releases.”

LogMate 7.31 and TiPSView 4.21 are the current software versions released last year continuing to improve the user experience by simplifying administrative management and extended product capability.

About TiPS Incorporated:

TiPS incorporated has been setting the standard in alarm management since introducing LogMate®, the first full-featured, commercially available alarm management software in 1990. TiPS is known as The Alarm Management Software Company and with 25 years of history, TiPS continues to deliver best-in-class process alarm management products and services worldwide.
